1.

Which of these methods are used by organizers to prevent overfitting to the test set using scores from the leaderboard?

☒ Splitting test for public/private

Correct

The submissions are scored on public part of the test set while private score is only revealed when competition ends, thus it is not possible to overfit to private part

☐ Shuffling order of rows in train and test sets

Un-selected is correct

☐ Adding non-relevant samples to test set

This should be selected

☒ Limiting number of submissions per day

Correct

This also makes "leaderboard probing" much harder
